

If you download the code and not working try this!

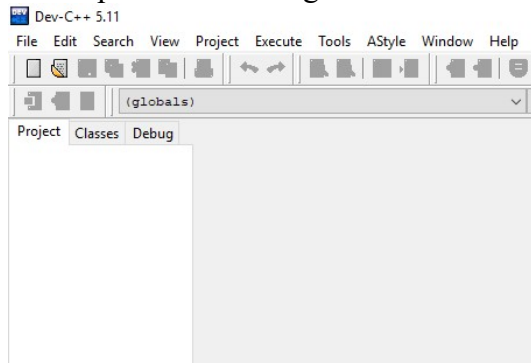

Download the music named Feeling.wav in my github

After that create a new folder and move the music in the new folder.

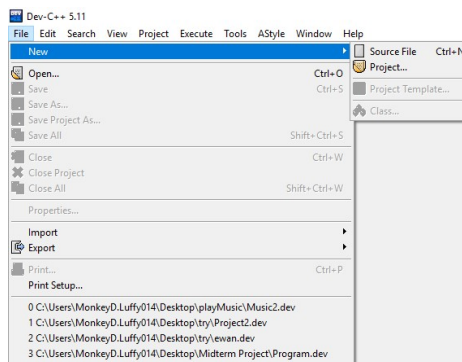

Then.

Copy the code from the github.

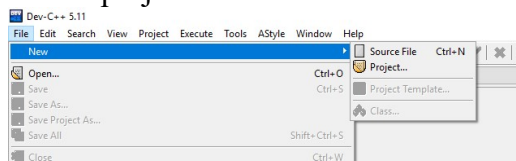

Then open the devc++ goto the File

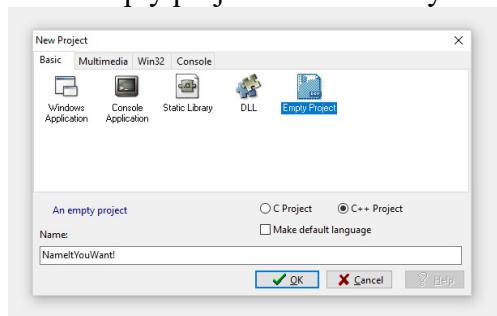

click new.

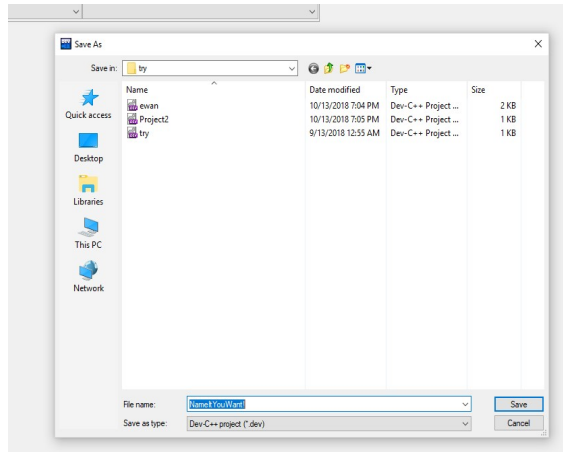

Click project.

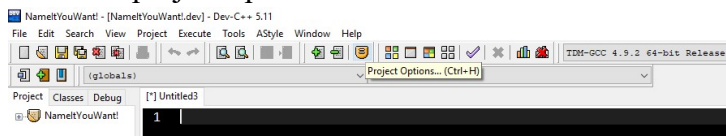

Click empty project and name it you want

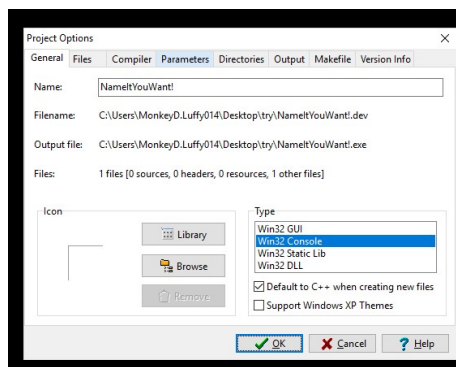

Then save the project to the folder you created together with the music.

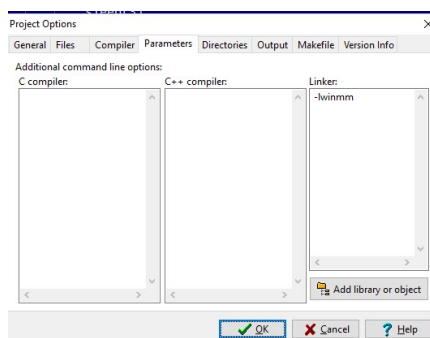

Click the project option

Choose the PARAMETERS

Then type the linker “-lwinmm” then click okay.

Then paste the code and compile it then run.

Thank you!!!
